## LISTING OF THE CLAIMS

This listing of claims will replace all prior versions, and listings, of this application.

## Listing of Claims:

1. (Original) A method for retrieving data for use in an interactive television application system in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by an on-demand media data source, wherein the non-on-demand and on-demand media data sources are separate, comprising:

retrieving the non-on-demand media data from the non-on-demand media data source;

automatically retrieving the on-demand media data from the on-demand media data source;

automatically caching the on-demand media data; displaying the on-demand media data from cache in response to a user indication to access at least the on-demand media data; and

displaying the non-on-demand media data in response to a user indication to access at least the non-on-demand data.

- 2. (Original) The method of claim 1, wherein the non-on-demand media data retrieved is television program listings data.
- (Original) The method of claim 1, wherein the on-demand media data retrieved is genre data.

- 4. (Original) The method of claim 1, wherein the on-demand media data retrieved is interactive television application software data.
- 5. (Original) The method of claim 1, wherein the on-demand media data retrieved is video-on-demand listings data.
- 6. (Original) The method of claim 1, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 7. (Original) The method of claim 1, wherein the on-demand media data retrieved is interactive video game listings data.
- 8. (Original) The method of claim 1, wherein the on-demand media data retrieved is weather data.
- 9. (Original) The method of claim 1, wherein the on-demand media data retrieved is sports statistics data.
- 10. (Original) The method of claim 1, wherein the on-demand media data retrieved is stock market data.
- 11. (Original) The method of claim 1, further comprising providing metadata contemporaneously with non-on-demand media data.
- 12. (Original) The method of claim 1, further comprising providing metadata contemporaneously with on-demand media data.

- 13. (Original) The method of claim 1, further comprising retrieving on-demand media data from the on-demand media data source in response to a user selection of an on-demand media listing.
- 14. (Original) The method of claim 1, further comprising determining if the on-demand media data is cached.
- 15. (Original) The method of claim 1, further comprising determining if on-demand media data needs to be retrieved from the on-demand media data source.
- 16. (Original) The method of claim 1, further comprising determining whether a connection exists between the interactive television application system and the on-demand media data source.
- 17. (Original) The method of claim 1, further comprising establishing a connection between the interactive television application system and the on-demand media data source.
- 18. (Original) The method of claim 1, further comprising retrieving on-demand media data from multiple on-demand media data sources.
- 19. (Original) The method of claim 1, further comprising caching on-demand media data from multiple on-demand media data sources.

- 20. (Original) The method of claim 1, further comprising displaying non-on-demand media data and on-demand media data concurrently.
- 21. (Currently Amended) Computer-readable media for retrieving data for use in an interactive television application system in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by a on-demand media data source, wherein the on-demand and non-on-demand media data sources are separate, where the <a href="computer-readable">computer-readable</a> media is encoded with machine-readable instructions for performing the method comprising:

retrieving the non-on-demand media data from the non-on-demand media data source;

automatically retrieving the on-demand media data from the on-demand media data source;

automatically caching the on-demand media data; displaying the on-demand media data from cache in response to a user indication to access at least the on-demand media data; and

displaying the non-on-demand media data in response to a user indication to access at least the non-on-demand data.

- 22. (Original) The computer-readable media of claim 21, wherein the non-on-demand media data retrieved is television program listings data.
- 23. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is genre data.

- 24. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is interactive television application software data.
- 25. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is video-on-demand listings data.
- 26. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 27. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is interactive video game listings data.
- 28. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is weather data.
- 29. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is sports statistics data.
- 30. (Original) The computer-readable media of claim 21, wherein the on-demand media data retrieved is stock market data.
- 31. (Original) The computer-readable media of claim 21, further comprising providing metadata contemporaneously with the non-on-demand media data.

- 32. (Original) The computer-readable media of claim 21, further comprising providing metadata contemporaneously with the on-demand media data.
- 33. (Original) The computer-readable media of claim 21, further comprising retrieving on-demand media data from the on-demand media data source in response to a user selection of an on-demand media listing.
- 34. (Original) The computer-readable media of claim 21, further comprising determining if the on-demand media data is cached.
- 35. (Original) The computer-readable media of claim 21, further comprising determining if on-demand media data needs to be retrieved from the on-demand media data source.
- 36. (Original) The computer-readable media of claim 21, further comprising determining whether a connection exists between the interactive television application system and the on-demand media data source.
- 37. (Original) The computer-readable media of claim 21, further comprising establishing a connection between the interactive television application system and the on-demand media data source.
- 38. (Original) The computer-readable media of claim 21, further comprising retrieving on-demand media data from multiple on-demand media data sources.

- 39. (Original) The computer-readable media of claim 21, further comprising caching on-demand media data from multiple on-demand media data sources.
- 40. (Original) The computer-readable media of claim 21, further comprising displaying non-on-demand media data and on-demand media data concurrently.
- 41. (Original) A system for retrieving data for use in an interactive television application system in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by a on-demand media data source, wherein the on-demand and the non-on-demand media data sources are separate, comprising:

a means for retrieving the non-on-demand media data from the non-on-demand media data source;

a means for automatically retrieving the ondemand media data from the on-demand media data source;

a means for automatically caching the on-demand media data;

a means for displaying the on-demand media data from cache in response to a user indication to access at least the on-demand-media data; and

a means for displaying the non-on-demand media data in response to a user indication to access at least the non-on-demand data.

42. (Original) The system of claim 41, wherein the non-on-demand media data retrieved is television program listings data.

43. (Original) The system of claim 41, wherein the on-demand media data retrieved is genre data.

- 44. (Original) The system of claim 41, wherein the on-demand media data retrieved is interactive television application software data.
- 45. (Original) The system of claim 41, wherein the on-demand media data retrieved is video-on-demand listings data.
- 46. (Original) The system of claim 41, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 47. (Original) The system of claim 41, wherein the on-demand media data retrieved is interactive video game listings data.
- 48. (Original) The system of claim 41, wherein the on-demand media data retrieved is weather data.
- 49. (Original) The system of claim 41, wherein the on-demand media data retrieved is sports statistics data.
- 50. (Original) The system of claim 41, wherein the on-demand media data retrieved is stock market data.
- 51. (Original) The system of claim 41, further comprising a means providing metadata contemporaneously with non-on-demand media data.

- 52. (Original) The system of claim 41, further comprising a means for providing metadata contemporaneously with on-demand media data.
- 53. (Original) The system of claim 41, further comprising a means for retrieving on-demand media data from the on-demand media data source in response to a user selection of an on-demand media listing.
- 54. (Original) The system of claim 41, further comprising a means for determining if the on-demand media data is cached.
- 55. (Original) The system of claim 41, further comprising a means for determining if on-demand media data needs to be retrieved from the on-demand media data source.
- 56. (Original) The system of claim 41, further comprising a means for determining whether a connection exists between the interactive television application system and the on-demand media data source.
- 57. (Original) The system of claim 41, further comprising a means for establishing a connection between the interactive television application system and the on-demand media data source.
- 58. (Original) The system of claim 41, further comprising a means for retrieving on-demand media data from multiple on-demand media data sources.

- 59. (Original) The system of claim 41, further comprising a means for caching on-demand media data from multiple on-demand media data sources.
- 60. (Original) The system of claim 41, further comprising a means for displaying non-on-demand media data and on-demand media data concurrently.
- 61. (Original) A system for retrieving data for use in an interactive television application system in which non-on-demand media data is provided by a non-on-demand media data source and on-demand media data is provided by an on-demand media data source, wherein the non-on-demand and on-demand media data sources are separate, comprising:

a communications device for communicating with the on-demand media data source and non-on-demand media data source;

cache memory;

a display device;

a user input device;

control circuitry programmed to:

direct the communications device to retrieve the non-on-demand media data from the non-on-demand media data source;

automatically direct the communications device to retrieve the on-demand media data from the on-demand media data source;

automatically cache the on-demand media data in the cache memory;

in response to receiving a user indication to access at least the on-demand media data from the user

input device, direct the display device to display the ondemand media data cached in the cache memory; and

in response to receiving a user indication to access at least the non-on-demand media data from the user input device, direct the display device to display the non-on-demand media data.

- 62. (Original) The system of claim 61, wherein the non-on-demand media data retrieved is television program listings data.
- 63. (Original) The system of claim 61, wherein the on-demand media data retrieved is genre data.
- 64. (Original) The system of claim 61, wherein the on-demand media data retrieved is interactive television application software data.
- 65. (Original) The system of claim 61, wherein the on-demand media data retrieved is video-on-demand listings data.
- 66. (Original) The system of claim 61, wherein the on-demand media data retrieved is audio-on-demand listings data.
- 67. (Original) The system of claim 61, wherein the on-demand media data retrieved is interactive video game listings data.
- 68. (Original) The system of claim 61, wherein the on-demand media data retrieved is weather data.

- 69. (Original) The system of claim 61, wherein the on-demand media data retrieved is sports statistics data.
- 70. (Original) The system of claim 61, wherein the on-demand media data retrieved is stock market data.
- 71. (Original) The system of claim 61, wherein metadata is contemporaneously retrieved along with the non-on-demand media data.
- 72. (Original) The system of claim 61, wherein metadata is contemporaneously retrieved with the on-demand media data.
- 73. (Original) The system of claim 61, wherein the control circuitry is directed to determine if the on-demand media data is cached in the cache memory.
- 74. (Original) The system of claim 61, wherein the control circuitry is directed to determine if on-demand media data needs to be retrieved from the on-demand media data source.
- 75. (Original) The system of claim 61, wherein the control circuitry is directed to determine whether a connection exists between the communications device and the on-demand media data source.
- 76. (Original) The system of claim 61, wherein the control circuitry is directed to establish a connection between the communications device and the on-demand media data source.

- 77. (Original) The system of claim 61, wherein the control circuitry is directed to retrieve on-demand media data from multiple on-demand media data sources using the communications device.
- 78. (Original) The system of claim 61, wherein the control circuitry is directed to cache on-demand media data from multiple on-demand media data sources in the cache memory.
- 79. (Original) The system of claim 61, wherein the control circuitry is directed to display non-on-demand media data and on-demand media data concurrently on the display device.
